6.3. Referencia de la Clase edu.duke.DirectoryResource

Métodos públicos

- DirectoryResource ()
- Iterable < File > selectedFiles ()

6.3.1. Descripción detallada

The <code>DirectoryResource</code> class allows the user to choose one or more files from a directory (or folder) with a file selection dialog box by using the method <code>selectedFiles</code>. These files can then be iterated over using a <code>for</code> loop.

Example usage:

```
DirectoryResource dr = new DirectoryResource();
for (File f : dr.selectedFiles()) {
    ImageResource ir = new ImageResource(f);
    ir.draw();
}
```

This software is licensed with an Apache 2 license, see $http://www.apache.org/licenses/ \leftarrow LICENSE-2.0$ for details.

Autor

Duke Software Team

6.3.2. Documentación del constructor y destructor

6.3.2.1. DirectoryResource()

edu.duke.DirectoryResource.DirectoryResource () [inline]

Create a DirectoryResource object.

Creating a DirectoryResource object does not open a dialog box for selecting files.

6.3.3. Documentación de las funciones miembro

6.3.3.1. selectedFiles()

```
Iterable< File > edu.duke.DirectoryResource.selectedFiles ( ) [inline]
```

Open a file selection dialog box to allow the user to navigate to a directory and select one or more files from the chosen directory (or folder).

The file selection dialog box opened starts in the current project folder.

Devuelve

an Iterable that accesses the chosen files one at a time

Gráfico de llamadas a esta función:

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/edu/duke/DirectoryResource.java

6.4. Referencia de la Clase movieRecommendaton.raters.EfficientRater

Diagrama de herencias de movieRecommendaton.raters.EfficientRater

Diagrama de colaboración para movieRecommendaton.raters.EfficientRater:

Métodos públicos

- EfficientRater (String id)
- void addRating (String item, double rating)
- boolean hasRating (String item)
- String getID ()
- double getRating (String item)
- int numRatings ()
- ArrayList< String > getItemsRated ()

Atributos privados

- String myID
- HashMap< String, Rating > myRatings

6.4.1. Descripción detallada

Implements a more efficient Rater for movies using a HashMap.

6.4.2. Documentación del constructor y destructor

6.4.2.1. EfficientRater()

```
\label{eq:movieRecommendation.raters.} \mbox{EfficientRater.EfficientRater} \mbox{ (} \\ \mbox{String } id \mbox{ ) } \mbox{ [inline]}
```

6.4.3.1. addRating()

```
void movieRecommendaton.raters.EfficientRater.addRating ( String \ item, double \ rating \ ) \ \ [inline]
```

Implementa movieRecommendaton.raters.Rater.

6.4.3.2. getID()

```
String movieRecommendaton.raters.EfficientRater.getID ( ) [inline]
```

Implementa movieRecommendaton.raters.Rater.

6.4.3.3. getItemsRated()

```
ArrayList< String > movieRecommendaton.raters.EfficientRater.getItemsRated ( ) [inline]
```

Implementa movieRecommendaton.raters.Rater.

6.4.3.4. getRating()

Implementa movieRecommendaton.raters.Rater.

6.4.3.5. hasRating()

Implementa movieRecommendaton.raters.Rater.

6.4.3.6. numRatings()

```
int movieRecommendaton.raters.EfficientRater.numRatings ( ) [inline]
```

Implementa movieRecommendaton.raters.Rater.

6.4.4. Documentación de los datos miembro

6.4.4.1. myID

String movieRecommendaton.raters.EfficientRater.myID [private]

6.4.4.2. myRatings

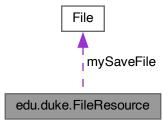

```
HashMap<String, Rating> movieRecommendaton.raters.EfficientRater.myRatings [private]
```

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/movieRecommendaton/raters/EfficientRater.java

6.5. Referencia de la Clase edu.duke.FileResource

Diagrama de colaboración para edu.duke.FileResource:

Métodos públicos

- FileResource ()
- FileResource (File file)
- FileResource (String filename)
- FileResource (boolean writable)
- FileResource (File file, boolean writable)
- FileResource (String filename, boolean writable)
- Iterable < String > lines ()
- Iterable < String > words ()
- String asString ()
- CSVParser getCSVParser ()
- CSVParser getCSVParser (boolean withHeader)
- CSVParser getCSVParser (boolean withHeader, String delimiter)
- Iterable < String > getCSVHeaders (CSVParser parser)
- void write (String s)
- void write (StorageResource list)
- void write (String[] list)
- void write (ArrayList< String > list)

Métodos privados

- void initRead ()
- void initRead (File f)
- void initRead (String fname)
- String initFromStream (InputStream stream)
- void initWrite ()
- void initWrite (File f)
- void initWrite (String fname)

Atributos privados

- String myPath
- String mySource
- File mySaveFile

6.5.1. Descripción detallada

The FileResource class represents a file and allows access to its contents a line at a time, using the method lines, or a word at a time, using the method words. These strings can then be iterated over using a for loop.

Example usage:

```
FileResource fr = new FileResource();
for (String s : fr.words()) {
    // print or process s
}
```

If each line of the file represents separated data values, because its a CSV file, then the user can get a get \leftarrow CSVParser object to access that data more directly, using one of the getCSVParser methods.

Example CSV usage:

```
FileResource fr = new FileResource("food.csv");
for (CSVRecord record : fr.getCSVParser()) {
    // print or process fields in record
    String name = record.get("Name");
    // other processing
}
```

This software is licensed with an Apache 2 license, see $http://www.apache.org/licenses/ \\ LICENSE-2.0 for details.$

Autor

Duke Software Team

6.5.2. Documentación del constructor y destructor

6.5.2.1. FileResource() [1/6]

```
edu.duke.FileResource.FileResource ( ) [inline]
```

Create a FileResource object that opens the file chosen by the user using a file selection dialog box.

Excepciones

exception	if no file is selected by the user
-----------	------------------------------------

Gráfico de llamadas para esta función:

6.5.2.2. FileResource() [2/6]

Create a FileResource object that opens a file represented by the File object passed as a parameter.

Useful, for example, when used in conjunction with the DirectoryResource class.

Parámetros

file the file to be represented by this resource

Excepciones

exception	if the file cannot be accessed
-----------	--------------------------------

Gráfico de llamadas para esta función:

6.5.2.3. FileResource() [3/6]

Create a FileResource object that opens a file whose name is passed as a parameter.

The named file should be on the current class path to be found.

Parámetros

filename	the name of the file to be opened
----------	-----------------------------------

Excepciones

exception	if the filename cannot be accessed
-----------	------------------------------------

Gráfico de llamadas para esta función:

6.5.2.4. FileResource() [4/6]

```
edu.duke.FileResource.FileResource (
                boolean writable ) [inline]
```

Create a FileResource object that opens the file chosen by the user using a file selection dialog box, possibly to write to it.

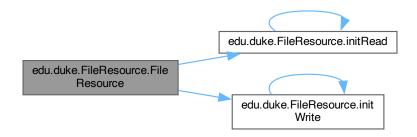

If the user wants to change the contents of the open file by using the method write to add new strings to it, pass true as the second parameter. Otherwise it is assumed the user will only iterate over the existing contents of the file.

Parámetros

writable	allow changes to this file only if true
----------	---

Excepciones

exception	if no file is selected by the user

6.5.2.5. FileResource() [5/6]

Create a FileResource object that opens a file represented by the File object passed as a parameter, possibly to write to it.

If the user wants to change the contents of the open file by using the method write to add new strings to it, pass true as the second parameter. Otherwise it is assumed the user will only iterate over the existing contents of the file.

Useful, for example, when used in conjunction with the DirectoryResource class.

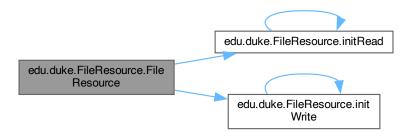

Parámetros

file	the file to be represented by this resource
writable	allow changes to this file only if true

Excepciones

exception	if the file cannot be accessed
-----------	--------------------------------

Gráfico de llamadas para esta función:

6.5.2.6. FileResource() [6/6]

Create a FileResource object that opens a file whose name is passed as a parameter, possibly to write to it.

If the user wants to change the contents of the open file by using the method write to add new strings to it, pass true as the second parameter. Otherwise it is assumed the user will only iterate over the existing contents of the file.

The named file should be on the current class path to be found.

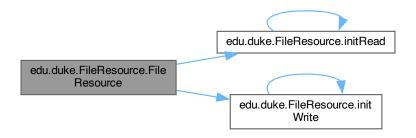

Parámetros

filename	the name of the file to be opened
writable	allow changes to this file only if true

Excepciones

ception if the filenan	ne cannot be accessed
------------------------	-----------------------

Gráfico de llamadas para esta función:

6.5.3. Documentación de las funciones miembro

6.5.3.1. asString()

```
String edu.duke.FileResource.asString ( ) [inline]
```

Return entire contents of this opened file as one string.

Devuelve

a String that is the contents of the open file

6.5.3.2. getCSVHeaders()

Allows access to the column names of the header row of a CSV file (the first line in the file) one at a time. If the CSV file did not have a header row, then an empty Iterator is returned.

Parámetros

parser that has been crea	ted for this file
---------------------------	-------------------

Devuelve

an Iterable that allows access one header name at a time

6.5.3.3. getCSVParser() [1/3]

CSVParser edu.duke.FileResource.getCSVParser () [inline]

Returns a CSVParser object to access the contents of an open file.

Each line of the file should be formatted as data separated by commas and with a header row to describe the column names.

Devuelve

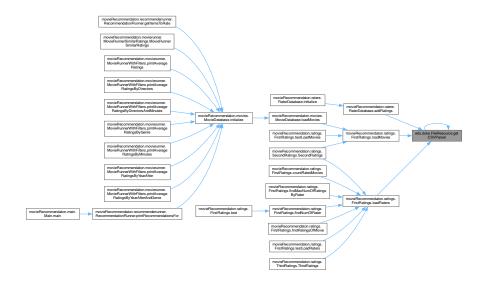

a CSVParser that can provide access to the records in the file one at a time

Excepciones

	exception	if this file does not represent a CSV formatted data	
--	-----------	--	--

Gráfico de llamadas a esta función:

6.5.3.4. getCSVParser() [2/3]

Returns a CSVParser object to access the contents of an open file, possibly without a header row.

Each line of the file should be formatted as data separated by commas and with/without a header row to describe the column names.

Parámetros

withHeader	uses first row of data as a header row only if true
------------	---

Devuelve

a ${\tt CSVParser}$ that can provide access to the records in the file one at a time

Excepciones

exception	if this file does not represent a CSV formatted data

Gráfico de llamadas para esta función:

6.5.3.5. getCSVParser() [3/3]

```
CSVParser edu.duke.FileResource.getCSVParser (
boolean withHeader,
String delimiter ) [inline]
```

Returns a CSVParser object to access the contents of an open file, possibly without a header row and a different data delimiter than a comma.

Each line of the file should be formatted as data separated by the delimiter passed as a parameter and with/without a header row to describe the column names. This is useful if the data is separated by some character other than a comma.

Parámetros

withHeader	uses first row of data as a header row only if true
delimiter	a single character that separates one field of data from another

Devuelve

a ${\tt CSVParser}$ that can provide access to the records in the file one at a time

Excepciones

exception	if this file does not represent a CSV formatted data
exception	<pre>if delimiter.length() != 1</pre>

6.5.3.6. initFromStream()

```
String edu.duke.FileResource.initFromStream (
InputStream stream ) [inline], [private]
```

Gráfico de llamadas a esta función:

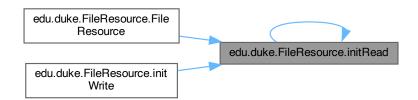

6.5.3.7. initRead() [1/3]

void edu.duke.FileResource.initRead () [inline], [private]

Gráfico de llamadas para esta función:

6.5.3.8. initRead() [2/3]

Gráfico de llamadas para esta función:

6.5.3.9. initRead() [3/3]

Gráfico de llamadas para esta función:

6.5.3.10. initWrite() [1/3]

```
void edu.duke.FileResource.initWrite ( ) [inline], [private]
```

Gráfico de llamadas a esta función:

6.5.3.11. initWrite() [2/3]

Gráfico de llamadas para esta función:

6.5.3.12. initWrite() [3/3]

6.5.3.13. lines()

```
Iterable< String > edu.duke.FileResource.lines ( ) [inline]
```

Allow access to this opened file one line at a time.

Devuelve

an Iterable that will allow access to contents of opened file one line at a time.

Gráfico de llamadas a esta función:

6.5.3.14. words()

```
Iterable< String > edu.duke.FileResource.words ( ) [inline]
```

Allow access to this opened file one word at a time, where words are separated by white-space. This means any form of spaces, like tabs or newlines, can delimit words.

Devuelve

an Iterable that will allow access to contents of opened file one word at a time.

6.5.3.15. write() [1/4]

```
void edu.duke.FileResource.write ( {\tt ArrayList} < {\tt String} > {\tt list} \ ) \quad [inline]
```

Writes a list of strings to the end of this file, one element per line.

Parámetros

list the strings to saved to the file

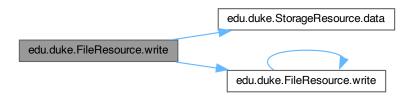

6.5.3.16. write() [2/4]

Writes a list of strings to the end of this file, one element per line.

Parámetros

list the strings to saved to the file

Gráfico de llamadas para esta función:

6.5.3.17. write() [3/4]

```
void edu.duke.FileResource.write ( {\tt String}\ s\ )\ [{\tt inline}]
```

Writes a string to the end of this file.

Parámetros

s the string to saved to the file

Gráfico de llamadas a esta función:

6.5.3.18. write() [4/4]

Writes a list of strings to the end of this file, one element per line.

Parámetros

list the strings to saved to the file

Gráfico de llamadas para esta función:

6.5.4. Documentación de los datos miembro

6.5.4.1. myPath

String edu.duke.FileResource.myPath [private]

6.5.4.2. mySaveFile

File edu.duke.FileResource.mySaveFile [private]

6.5.4.3. mySource

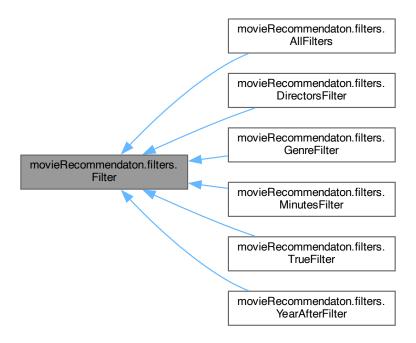

String edu.duke.FileResource.mySource [private]

6.6. Referencia de la Interfaz movieRecommendaton.filters.Filter

Diagrama de herencias de movieRecommendaton.filters.Filter

Métodos públicos

boolean satisfies (String id)

6.6.1. Descripción detallada

Interface that represents a Filter.

6.6.2. Documentación de las funciones miembro

6.6.2.1. satisfies()

```
boolean movieRecommendaton.filters.Filter.satisfies ( $\operatorname{String}\ id\ )
```

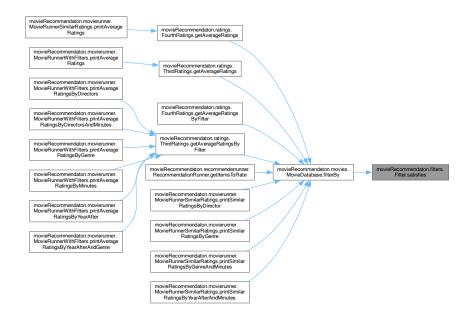

Returns true if the ID passes the filter.

Parámetros

id A generic ID for an object.

Implementado en movieRecommendaton.filters.AllFilters, movieRecommendaton.filters.DirectorsFilter, movieRecommendaton.filters.movieRecommendaton.filters.TrueFilter y movieRecommendaton.filters.YearAfterFilter.

Gráfico de llamadas a esta función:

La documentación para este interfaz fue generada a partir del siguiente fichero:

src/main/java/movieRecommendaton/filters/Filter.java

6.7. Referencia de la Clase movieRecommendaton.ratings.FirstRatings

Métodos públicos

- ArrayList < Movie > loadMovies (String filename)
- ArrayList< Rater > loadRaters (String filename)
- void findNumOfRater (String filename, String RaterID)
- void findMaxNumOfRatingsByRater (String filename)
- void findRatingsOfMovie (String filename, String movieID)
- void countRatedMovies (String filename)
- void test ()
- void testLoadMovies (String filename)
- void testLoadRaters (String filename)

6.7.1. Descripción detallada

Process information in a CSV File about movie information.

6.7.2. Documentación de las funciones miembro

6.7.2.1. countRatedMovies()

```
\begin{tabular}{ll} \begin{tabular}{ll} void movieRecommendation.ratings.FirstRatings.countRatedMovies ( \\ String \it{filename}\ ) & [inline] \end{tabular}
```

Counts the unique number of movies inside the selected file. Gráfico de llamadas para esta función:

6.7.2.2. findMaxNumOfRatingsByRater()

```
\label{lem:commendation} \mbox{void movieRecommendation.ratings.} FirstRatings.findMaxNumOfRatingsByRater ( \\ \mbox{String } filename \mbox{)} \mbox{ [inline]}
```

Finds the rater with the highest number of records inside the selected file. Gráfico de llamadas para esta función:

6.7.2.3. findNumOfRater()

```
void movieRecommendaton.ratings.FirstRatings.findNumOfRater ( String \ filename, \\ String \ RaterID \ ) \ \ [inline]
```

Returns the number of records of the Rater with the selected raterID. Gráfico de llamadas para esta función:

6.7.2.4. findRatingsOfMovie()

```
void movieRecommendaton.ratings.FirstRatings.findRatingsOfMovie ( String \ filename, \\ String \ movieID \ ) \ \ [inline]
```

Returns the number of ratings a selected movie has, inside a selected file. Gráfico de llamadas para esta función:

6.7.2.5. loadMovies()

This method processes movie records from a CSV File

Parámetros

filename	CSV File containing movie information.
----------	--

Devuelve

ArrayList<Movie> with all the Movie data from the file.

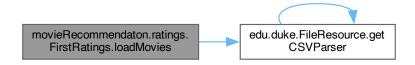

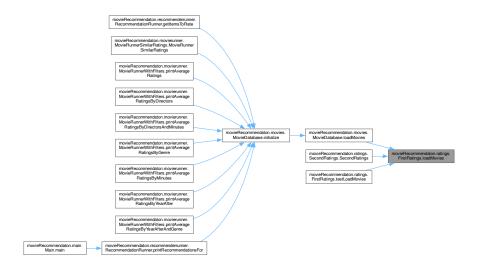

Gráfico de llamadas a esta función:

6.7.2.6. loadRaters()

```
\label{eq:arrayList} \mbox{ArrayList} < \mbox{Rater} > \mbox{movieRecommendaton.ratings.FirstRatings.loadRaters} \ ( \\ \mbox{String } \mbox{filename} \ ) \ \mbox{[inline]}
```

This method processes rater records from a CSV File.

Parámetros

filename	CSV File containing rater information.
----------	--

Devuelve

ArrayList<Rater> with all the Rater data from the file.

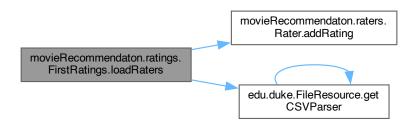

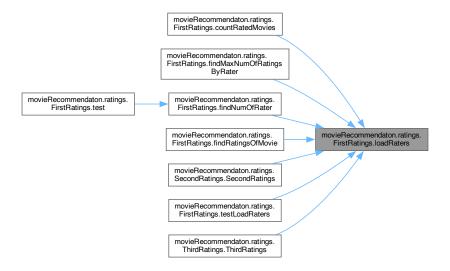

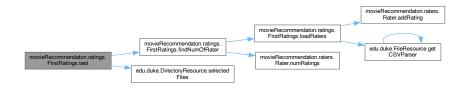

Gráfico de llamadas a esta función:

6.7.2.7. test()

void movieRecommendaton.ratings.FirstRatings.test () [inline]

Gráfico de llamadas para esta función:

6.7.2.8. testLoadMovies()

 $\begin{tabular}{ll} \begin{tabular}{ll} void movieRecommendation.ratings.FirstRatings.testLoadMovies (\\ String \it{filename} \end{tabular}) \begin{tabular}{ll} [inline] \end{tabular}$

6.7.2.9. testLoadRaters()

```
\begin{tabular}{ll} void movieRecommendation.ratings.FirstRatings.testLoadRaters ( \\ String \it filename ) & [inline] \end{tabular}
```

Gráfico de llamadas para esta función:

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/movieRecommendaton/ratings/FirstRatings.java

6.8. Referencia de la Clase movieRecommendaton.ratings.FourthRatings

Métodos públicos

- FourthRatings ()
- FourthRatings (String ratingsfile)
- int getRaterSize ()
- ArrayList< Rating > getAverageRatings (int minimalRaters)
- ArrayList< Rating > getAverageRatingsByFilter (int minimalRaters, Filter filterCriteria)
- ArrayList< Rating > getSimilarRatings (String id, int numSimilarRaters, int minimalRaters)

Métodos privados

- double getAverageByID (String movieID, int minimalRaters)
- double dotProduct (Rater me, Rater r)
- ArrayList< Rating > getSimilarities (String id)

6.8.1. Descripción detallada

Processes information in a CSV File about movies and ratings.

6.8.2. Documentación del constructor y destructor

6.8.2.1. FourthRatings() [1/2]

```
movieRecommendaton.ratings.FourthRatings.FourthRatings ( ) [inline]
```

6.8.2.2. FourthRatings() [2/2]

```
\begin{tabular}{ll} {\tt movieRecommendaton.ratings.FourthRatings.FourthRatings.} \\ {\tt String} \ ratingsfile \ ) \ \ [inline] \end{tabular}
```

Gráfico de llamadas para esta función:

6.8.3. Documentación de las funciones miembro

6.8.3.1. dotProduct()

Translates a rating from 0-10 scale to -5 to 5 scale and returns the dot product of the ratings of movies that they both rated.

This method is called by getSimilarities. Gráfico de llamadas para esta función:

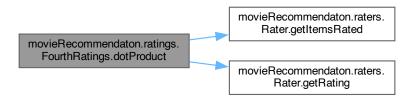

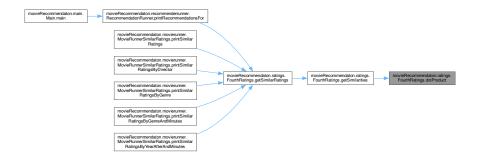

Gráfico de llamadas a esta función:

6.8.3.2. getAverageByID()

Returns the average movie rating for this ID if there are at least minimalRaters ratings.

Parámetros

movieID	Movie to calculate the average rating of.
minimalRaters	minimum number of raters necessary to return the average.

Devuelve

Average movie rating for movieID if there are at least minimalRater ratings, otherwise 0.0

Gráfico de llamadas para esta función:

6.8.3.3. getAverageRatings()

```
\label{eq:arrayList} \mbox{ArrayList} < \mbox{Rating} > \mbox{movieRecommendaton.ratings.FourthRatings.getAverageRatings} \mbox{ (} \\ \mbox{int } \mbox{minimalRaters} \mbox{ ) [inline]}
```

Finds the average rating for every movie that has been rated by at least minimalRater raters.

Parámetros

minimalRaters	minimum number of raters to be considered.

Devuelve

ArrayList<Rating> containing all Rating objects for movies that have at least the minimal number of raters supplying a rating.

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

```
movieRecommendaton.movierunner.
MovieRunnerSimilarRatings.printAverage
Ratings

movieRecommendaton.ratings.
FourthRatings.getAverageRatings
```

6.8.3.4. getAverageRatingsByFilter()

Creates and returns and ArrayList<Rating> of all the movies that have at least minimalRaters ratings and satisfies the filter criteria. Gráfico de llamadas para esta función:

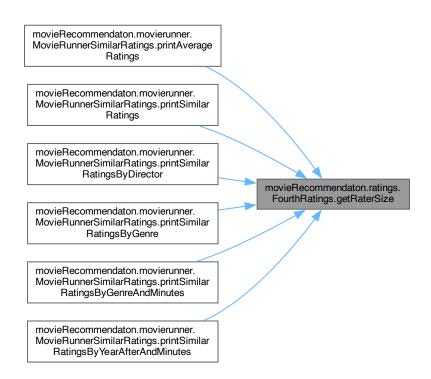

6.8.3.5. getRaterSize()

int movieRecommendaton.ratings.FourthRatings.getRaterSize () [inline]

Returns the number of raters in the file. Gráfico de llamadas para esta función:

6.8.3.6. getSimilarities()

```
\label{eq:arrayList} \mbox{ArrayList} < \mbox{Rating} > \mbox{movieRecommendaton.ratings.FourthRatings.getSimilarities} \mbox{ (} \\ \mbox{String } id \mbox{ ) [inline], [private]}
```

Computes a similarity rating for each rater in the RaterDatabase (except the rater with the ID given by the parameter) to see how similar they are to the Rater whose ID is the parameter to getSimilarities.

Note that in each Rating object the item field is a rater's ID, and the value field is the dot product comparison between that rater and the rater whose ID is the parameter to getSimilarities.

Parámetros

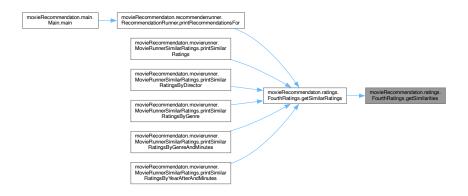

Devuelve

ArrayList<Rating> sorted by ratings from highest to lowest rating with the highest rating first and only including those raters who have a positive similarity rating since those with negative values are not similar in any way.

Gráfico de llamadas para esta función:

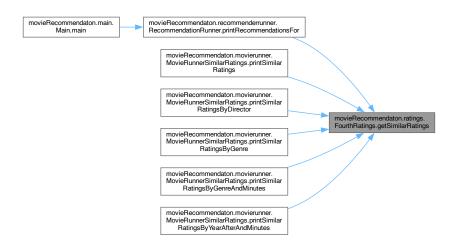

6.8.3.7. getSimilarRatings()

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/movieRecommendaton/ratings/FourthRatings.java

6.9. Referencia de la Clase movieRecommendaton.filters.GenreFilter

Diagrama de herencias de movieRecommendaton.filters.GenreFilter

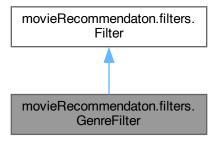

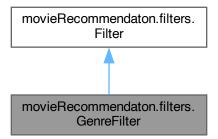

Diagrama de colaboración para movieRecommendaton.filters.GenreFilter:

Métodos públicos

- GenreFilter (String genre)
- boolean satisfies (String id)

Atributos privados

String myGenre

6.9.1. Descripción detallada

Represents a Filter to check the Genre of a Movie.

6.9.2. Documentación del constructor y destructor

6.9.2.1. GenreFilter()

```
movieRecommendaton.filters.GenreFilter.GenreFilter (
String \ genre \ ) \quad [inline]
```

6.9.3. Documentación de las funciones miembro

6.9.3.1. satisfies()

```
boolean movieRecommendaton.filters.GenreFilter.satisfies ( {\tt String} \ id \ ) \quad [{\tt inline}]
```

Returns true if the ID passes the filter.

Parámetros

Implementa movieRecommendaton.filters.Filter.

Gráfico de llamadas para esta función:

6.9.4. Documentación de los datos miembro

6.9.4.1. myGenre

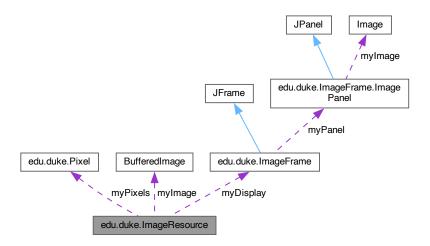

```
String movieRecommendaton.filters.GenreFilter.myGenre [private]
```

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/movieRecommendaton/filters/GenreFilter.java

6.10. Referencia de la Clase edu.duke.lmageResource

Diagrama de colaboración para edu.duke.ImageResource:

Métodos públicos

- ImageResource ()
- ImageResource (int width, int height)
- ImageResource (String fileName)
- ImageResource (File file)
- ImageResource (ImageResource other)
- int getWidth ()
- int getHeight ()
- Iterable < Pixel > pixels ()
- void draw ()
- String getFileName ()
- void setFileName (String name)
- Pixel getPixel (int x, int y)
- void setPixel (int x, int y, Pixel p)
- String toString ()
- void save ()
- void saveAs ()

Métodos privados

- Pixel[] imageToPixels (Image image)
- Pixel[] intsToPixels (int[] pixels, int width, int height)
- int[] pixelsToInts (Pixel[] pixels)
- void updateImage ()
- BufferedImage getBlankImage (int width, int height)
- BufferedImage getImageFromFile (String fileName)
- void setPath (String fileName)
- void init (File f)
- void init (String fileName, BufferedImage image)

Atributos privados

- Pixel[] myPixels
- BufferedImage myImage
- String myFileName
- String myPath
- ImageFrame myDisplay

6.10.1. Descripción detallada

The ImageResource class represents an image as a grid of Pixel objects and allows access to all of them, using the method pixels. These pixels can then be iterated over using a for loop.

Note, no changes made to the pixels in this image affect the original image opened unless you use the method save.

Example usage:

```
ImageResource image = new ImageResource();
for (Pixel p : image.pixels()) {
   int red = p.getRed();
   int green = p.getGreen();
   int blue = p.getBlue();
   int average = (red + green + blue) / 3;
   p.setRed(average);
   p.setGreen(average);
   p.setBlue(average);
}
image.draw();
```

This is open-source software released under the terms of the GPL ($http://www.gnu.org/licenses/gpl. \leftarrow html$).

6.10.2. Documentación del constructor y destructor

6.10.2.1. ImageResource() [1/5]

```
edu.duke.ImageResource.ImageResource ( ) [inline]
```

Create an ImageResource object that represents the file chosen by the user using a file selection dialog box.

Excepciones

exception if no file is selected by the user

Gráfico de llamadas para esta función:

6.10.2.2. ImageResource() [2/5]

Create an ImageResource object whose size is the width and height passed as parameters and whose pixels are all black.

Parámetros

width	the width of the image in pixels
height	the height of the image in pixels

Excepciones

exception	if the width or height are not positive values

Gráfico de llamadas para esta función:

6.10.2.3. ImageResource() [3/5]

```
edu.duke.ImageResource.ImageResource ( String \ fileName \ ) \quad [inline]
```

Create an ${\tt ImageResource}$ object from the file name passed as a parameter.

Parámetros

fileName the name of the file

Excepciones

exception	if the file cannot be accessed or is not in an image format
-----------	---

Gráfico de llamadas para esta función:

6.10.2.4. ImageResource() [4/5]

```
edu.duke.ImageResource.ImageResource ( \label{eq:file} \mbox{File } \mbox{\it file} \mbox{\it 0} \mbox{\it [inline]}
```

Create an ImageResource object from a file given as a parameter.

Parámetros

file	the file representing an image
------	--------------------------------

Excepciones

exception	if the file cannot be accessed or is not in an image format
-----------	---

6.10.2.5. ImageResource() [5/5]

Create an ImageResource object that is a copy of another image.

Parámetros

other the original image being	g copied
--------------------------------	----------

Gráfico de llamadas para esta función:

6.10.3. Documentación de las funciones miembro

6.10.3.1. draw()

```
void edu.duke.ImageResource.draw ( ) [inline]
```

Displays this image in a separate window. Gráfico de llamadas para esta función:

6.10.3.2. getBlankImage()

Gráfico de llamadas a esta función:

6.10.3.3. getFileName()

```
String edu.duke.ImageResource.getFileName ( ) [inline]
```

Returns the file name associated with this image.

Devuelve

the name of the file used to create this image or an empty string if it was created as a sized image

6.10.3.4. getHeight()

```
int edu.duke.ImageResource.getHeight ( ) [inline]
```

Returns the height of the image in pixels.

Devuelve

the image's height in pixels

6.10.3.5. getImageFromFile()

Gráfico de llamadas a esta función:

6.10.3.6. getPixel()

Returns the pixel at the (x, y) coordinates passed as a parameter.

Parámetros

X	the column position of the pixel
У	the row position of the pixel

Devuelve

the Pixel at the given (x, y) coordinates

6.10.3.7. getWidth()

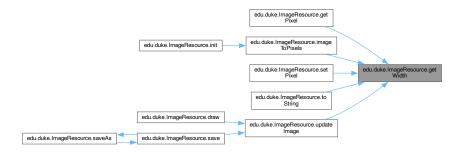

int edu.duke.ImageResource.getWidth () [inline]

Returns the width of the image in pixels.

Devuelve

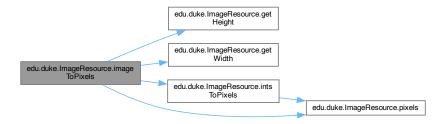

the image's width in pixels

Gráfico de llamadas a esta función:

6.10.3.8. imageToPixels()

Gráfico de llamadas para esta función:

6.10.3.9. init() [1/2]

```
void edu.duke.ImageResource.init ( \label{eq:fine_problem} \mbox{File } f \; ) \; \; \mbox{[inline], [private]}
```

Gráfico de llamadas para esta función:

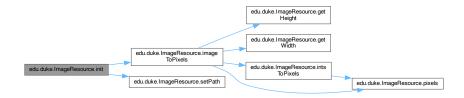

Gráfico de llamadas a esta función:

6.10.3.10. init() [2/2]

6.10.3.11. intsToPixels()

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

6.10.3.12. pixels()

```
Iterable< Pixel > edu.duke.ImageResource.pixels ( ) [inline]
```

Allow access to this image one pixel at a time.

Devuelve

an Iterable that will allow access to each pixel in this image

6.10.3.13. pixelsToInts()

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

6.10.3.14. save()

```
void edu.duke.ImageResource.save ( ) [inline]
```

Saves the image as a JPEG using its current file name or opens a file selection dialog box to allow the user to choose a name if no file name set (for example if this image was created as a blank sized image).

Excepciones

6.10.3.15. saveAs()

```
void edu.duke.ImageResource.saveAs ( ) [inline]
```

Saves the image as a JPEG by opening a file selection dialog box to allow the user to choose the new name for the file

Excepciones

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

6.10.3.16. setFileName()

```
void edu.duke.ImageResource.setFileName ( String \ \textit{name} \ ) \quad [inline]
```

Resets the file name associated with this image.

Useful, for example, when saving the results of changes to this image in a different file than the original.

Parámetros

name the new name for the file	
--------------------------------	--

6.10.3.17. setPath()

Gráfico de llamadas a esta función:

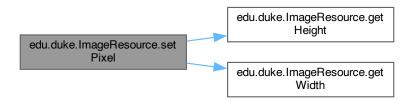

6.10.3.18. setPixel()

```
void edu.duke.ImageResource.setPixel (
    int x,
    int y,
    Pixel p ) [inline]
```

Resets the pixel at the given (x, y) coordinates but does not redraw it.

Parámetros

Х	the column position of the pixel
У	the row position of the pixel
р	the new pixel values to use

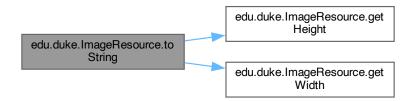

6.10.3.19. toString()

String edu.duke.ImageResource.toString () [inline]

Returns a string representation of the image (file name, width, and height).

Devuelve

a string representation of the image

6.10.3.20. updateImage()

void edu.duke.ImageResource.updateImage () [inline], [private]

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

6.10.4. Documentación de los datos miembro

6.10.4.1. myDisplay

ImageFrame edu.duke.ImageResource.myDisplay [private]

6.10.4.2. myFileName

String edu.duke.ImageResource.myFileName [private]

6.10.4.3. mylmage

BufferedImage edu.duke.ImageResource.myImage [private]

6.10.4.4. myPath

```
String edu.duke.ImageResource.myPath [private]
```

6.10.4.5. myPixels

```
Pixel [] edu.duke.ImageResource.myPixels [private]
```

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/edu/duke/ImageResource.java

6.11. Referencia de la Clase movieRecommendaton.main.Main

Métodos públicos estáticos

static void main (String[] args)

6.11.1. Documentación de las funciones miembro

6.11.1.1. main()

Gráfico de llamadas para esta función:

La documentación para esta clase fue generada a partir del siguiente fichero:

6.12. Referencia de la Clase movieRecommendaton.filters.MinutesFilter

Diagrama de herencias de movieRecommendaton.filters.MinutesFilter

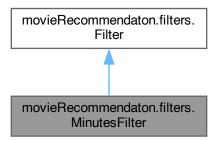

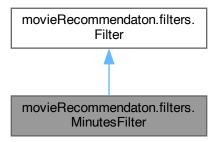

Diagrama de colaboración para movieRecommendaton.filters.MinutesFilter:

Métodos públicos

- MinutesFilter (int minMinutes, int maxMinutes)
- boolean satisfies (String id)

Atributos privados

- int myMin
- int myMax

6.12.1. Descripción detallada

Represents a Filter to check the duration of a Movie.

6.12.2. Documentación del constructor y destructor

6.12.2.1. MinutesFilter()

6.12.3. Documentación de las funciones miembro

6.12.3.1. satisfies()

```
boolean movieRecommendaton.filters.MinutesFilter.satisfies ( {\tt String} \ id \ ) \quad [{\tt inline}]
```

Returns true if the ID passes the filter.

Parámetros

id A generic ID for an object.

Implementa movieRecommendaton.filters.Filter.

Gráfico de llamadas para esta función:

6.12.4. Documentación de los datos miembro

6.12.4.1. myMax

int movieRecommendaton.filters.MinutesFilter.myMax [private]

6.17. Referencia de la Clase edu.duke.Pixel

Métodos públicos

- Pixel (Pixel other)
- int getX ()
- int getY ()
- int getRed ()
- int getGreen ()
- int getBlue ()
- int getAlpha ()
- void setRed (int r)
- void setGreen (int g)
- void setBlue (int b)
- void setAlpha (int a)
- String toString ()

Métodos privados

int clamp (int value)

Atributos privados

- int alpha = MAX_VALUE
- int red = 0
- int green = 0
- int blue = 0
- int myX
- int myY

6.17.1. Descripción detallada

The Pixel class represents a color as its component values of red, green, blue, as well as alpha (for transparency).

Each of the component values of a pixel must have a value between 0 and 255. If a value is given outside that range, it is changed to be within that range. As such, a negative value would be set to 0 and a value greater than 255 would be set to 255.

Example usage:

```
ImageResource image = new ImageResource();
for (Pixel p : image.pixels()) {
   int red = p.getRed();
   int green = p.getGreen();
   int blue = p.getBlue();
   int average = (red + green + blue) / 3;
   p.setRed(average);
   p.setGreen(average);
   p.setBlue(average);
}
image.draw();
```

This is open-source software released under the terms of the GPL ($http://www.gnu.org/licenses/gpl. \leftarrow html$).

6.17.2. Documentación del constructor y destructor

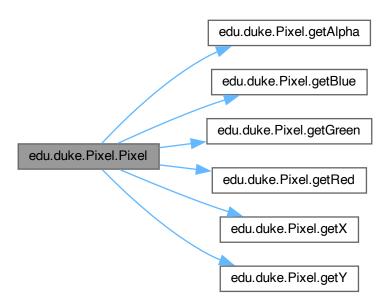

6.17.2.1. Pixel()

Creates a new Pixel from with the same values as the other pixel passed as a parameter.

Parámetros

other another pixel	
---------------------	--

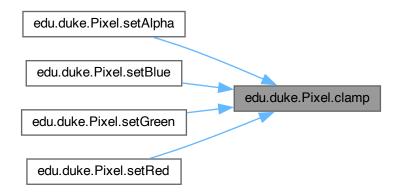

Gráfico de llamadas para esta función:

6.17.3. Documentación de las funciones miembro

6.17.3.1. clamp()

Gráfico de llamadas a esta función:

6.17.3.2. getAlpha()

```
int edu.duke.Pixel.getAlpha ( ) [inline]
```

Returns the value of the pixel's alpha (or transparency) component.

Devuelve

the pixel's alpha value within the range 0-255

6.17.3.3. getBlue()

```
int edu.duke.Pixel.getBlue ( ) [inline]
```

Returns the value of the pixel's blue component.

Devuelve

the pixel's blue value within the range 0-255

Gráfico de llamadas a esta función:

6.17.3.4. getGreen()

```
int edu.duke.Pixel.getGreen ( ) [inline]
```

Returns the value of the pixel's green component.

Devuelve

the pixel's green value within the range 0-255

6.17.3.5. getRed()

```
int edu.duke.Pixel.getRed ( ) [inline]
```

Returns the value of the pixel's red component.

Devuelve

the pixel's red value within the range 0-255

Gráfico de llamadas a esta función:

6.17.3.6. getX()

```
int edu.duke.Pixel.getX ( ) [inline]
```

Returns the pixel's x-coordinate within the image.

Devuelve

the x-coordinate of this pixel.

6.17.3.7. getY()

```
int edu.duke.Pixel.getY ( ) [inline]
```

Returns the pixel's y-coordinate within the image.

Devuelve

the y-coordinate of this pixel.

Gráfico de llamadas a esta función:

6.17.3.8. setAlpha()

Resets the value of the pixel's alpha (or transparency) component to the value passed as a parameter. If it is not in the range of 0-255 it is changed to be in that range.

Parámetros

a the alpha value

6.17.3.9. setBlue()

```
void edu.duke.Pixel.setBlue ( \quad \text{ int } b \text{ ) } \quad [\text{inline}]
```

Resets the value of the pixel's blue component to the value passed as a parameter. If it is not in the range of 0-255 it is changed to be in that range.

Parámetros

Gráfico de llamadas para esta función:

6.17.3.10. setGreen()

```
void edu.duke.Pixel.setGreen (  \qquad \qquad \text{int } g \text{ ) } \quad [\text{inline}]
```

Resets the value of the pixel's green component to the value passed as a parameter. If it is not in the range of 0-255 it is changed to be in that range.

Parámetros

6.17.3.11. setRed()

```
void edu.duke.Pixel.setRed (  \qquad \qquad \text{int } r \text{ ) } \quad [\text{inline}]
```

Resets the value of the pixel's red component to the value passed as a parameter. If it is not in the range of 0-255 it is changed to be in that range.

Parámetros

Gráfico de llamadas para esta función:

6.17.3.12. toString()

```
String edu.duke.Pixel.toString ( ) [inline]
```

Returns the string representation of the of the pixel.

Devuelve

a string containing the RGB values

6.17.4. Documentación de los datos miembro

- double distance (Point otherPt)
- String toString ()

Métodos públicos estáticos

static void main (String[] args)

Atributos privados

- int x
- int y

6.19.1. Descripción detallada

The Point class represents a two-dimensional location, constructed from (x,y) coordinates with some methods for access and the capability to calculate the distance from this point to another point.

Example usage:

```
Point a = new Point(3, 4);
Point b = new Point(2, 5);
double dist = a.distance(b);
```

6.20. Referencia de la Clase edu.duke.RangeResource

Diagrama de colaboración para edu.duke.RangeResource:

Métodos públicos

- RangeResource (int end)
- RangeResource (int start, int end)
- RangeResource (int start, int end, int increment)
- RangeResource (RangeResource other)
- String toString ()
- Iterable < Integer > sequence ()

Métodos privados

■ List< Integer > makeValues (int start, int end, int increment)

Atributos privados

- int myStart
- int myEnd
- int myIncrement
- List< Integer > myValues

6.20.1. Descripción detallada

The RangeResource class represents a range of integer (or whole) numbers and allows access to these numbers using the method sequence. The integers can then be iterated over using a for loop

Example usage:

```
// this prints the square number sequence for the first 9 numbers:
// 1, 4, 9, 16, 25, 36, 49, 64, 81
RangeResource rr = new RangeResource(1, 10);
for (int value : rr.sequence()) {
    System.out.println(value * value);
}
```

Another example usage:

```
// this prints the odd numbers in decreasing order within the given range:
// 37, 35, 33, 31, 29, 27, 25, 23
RangeResource rr = new RangeResource(37, 21, -2);
for (int value : rr.sequence()) {
    System.out.println(value);
}
```

This software is licensed with an Apache 2 license, see $http://www.apache.org/licenses/\leftarrow LICENSE-2.0$ for details.

Autor

Duke Software Team

6.20.2. Documentación del constructor y destructor

6.20.2.1. RangeResource() [1/4]

Create a RangeResource object, starting at 0 and going up to but not including end, [0 - end), that increments by 1.

Parámetros

```
end when to stop the range, not included as one of the values
```

Excepciones

```
exception if the end is negative
```

6.20.2.2. RangeResource() [2/4]

Create a RangeResource object, starting at start and going up to but not including end, [start - end), that increments by 1.

Parámetros

start	the first value in the range, included as one of the values
end	when to stop the range, not included as one of the values

Excepciones

6.20.2.3. RangeResource() [3/4]

```
edu.duke.RangeResource.RangeResource (
    int start,
    int end,
    int increment ) [inline]
```

Create a RangeResource object, starting at start and going up to but not including end, [start - end), that increments by the amount passed as a parameter.

Parámetros

start	the first value in the range, included as one of the values
end	when to stop the range, not included as one of the values
increment	how much to add to get the next value in the range's sequence

Excepciones

exception	if increment is negative when the end is greater than the start
exception	if increment is positive when the end is less than the start
exception	if increment is 0

6.20.2.4. RangeResource() [4/4]

Create an RangeResource object that is a copy of another range.

Parámetros

other the original range being copied

6.20.3. Documentación de las funciones miembro

6.20.3.1. makeValues()

Gráfico de llamadas a esta función:

6.20.3.2. sequence()

```
Iterable< Integer > edu.duke.RangeResource.sequence ( ) [inline]
```

Allow access to the numbers in this range one at a time.

Devuelve

an Iterable that will allow access to each number in this range

6.20.3.3. toString()

```
String edu.duke.RangeResource.toString ( ) [inline]
```

Return string representation of this range, with each value in the sequence separated by a comma.

Devuelve

a String containing all the values in the range

6.20.4. Documentación de los datos miembro

6.20.4.1. myEnd

6.24.1. Documentación del constructor y destructor

6.24.1.1. RecommendationRunner()

 $\verb|movieRecommendation.recommenderrunner.RecommendationRunner.RecommendationRunner|| () [inline]|$

6.24.2. Documentación de las funciones miembro

6.24.2.1. getItemsToRate()

```
ArrayList< String > movieRecommendation.recommenderrunner.RecommendationRunner.getItemsToRate ( ) [inline]
```

This method returns a list of movie IDs that will be used to look up the movies in the MovieDatabase and present them to users to rate.

The movies returned in the list will be displayed on a web page, so the number you choose may affect how long the page takes to load and how willing users are to rate the movies. For example, 10-20 should be fine, 50 or more would be too many.

There are no restrictions on the method you use to generate this list of movies: the most recent movies, movies from a specific genre, randomly chosen movies, or simply your favorite movies.

The ratings for these movies will make the profile for a new Rater that will be used to compare to for finding recommendations.

Implementa movieRecommendaton.recommenderrunner.Recommender.

Gráfico de llamadas para esta función:

6.24.2.2. printOut()

Gráfico de llamadas a esta función:

6.24.2.3. printRecommendationsFor()

```
\label{lem:commendation} void \ movie Recommendation. recommender runner. Recommendation Runner. print Recommendations For ( \\ String \ \textit{webRaterID}\ ) \ \ [inline]
```

This method returns nothing, but prints out an HTML table of the movies recommended for the given rater.

The HTML printed will be displayed on a web page, so the number you choose to display may affect how long the page takes to load. For example, you may want to limit the number printed to only the top 20-50 movies recommended or to movies not rater by the given rater.

You may also include CSS styling for your table using the <style> tag before you print the table. There are no restrictions on which movies you print, what order you print them in, or what information you include about each movie.

Parámetros

webRaterID	the ID of a new Rater that has been already added to the RaterDatabase with ratings for the	1
	movies returned by the method getItemsToRate	

Implementa movieRecommendaton.recommenderrunner.Recommender.

Diagrama de herencias de movieRecommendaton.recommenderrunner.Recommender

Métodos públicos

- ArrayList < String > getItemsToRate ()
- void printRecommendationsFor (String webRaterID)

6.25.1. Descripción detallada

Implement this interface to allow your code to be integrated with our web site.

When users first visit the recommender website, our code will call the method getItemsToRate() to get a list of movies to display on the web page for users to rate.

When a user submits their ratings, our code will call the method printRecommendationsFor to get your recommendations based on the user's ratings. The ID given to this method is for a new Rater that we have already added to the RaterDatabase with ratings for the movies returned by the first method. Whatever is printed from that method will be displayed on the web page: HTML, plain text, or debugging information.

6.25.2. Documentación de las funciones miembro

6.25.2.1. getItemsToRate()

```
ArrayList< String > movieRecommendaton.recommenderrunner.Recommender.getItemsToRate ( )
```

This method returns a list of movie IDs that will be used to look up the movies in the MovieDatabase and present them to users to rate.

The movies returned in the list will be displayed on a web page, so the number you choose may affect how long the page takes to load and how willing users are to rate the movies. For example, 10-20 should be fine, 50 or more would be too many.

There are no restrictions on the method you use to generate this list of movies: the most recent movies, movies from a specific genre, randomly chosen movies, or simply your favorite movies.

The ratings for these movies will make the profile for a new Rater that will be used to compare to for finding recommendations.

Implementado en movieRecommendaton.recommenderrunner.RecommendationRunner.

6.25.2.2. printRecommendationsFor()

This method returns nothing, but prints out an HTML table of the movies recommended for the given rater.

The HTML printed will be displayed on a web page, so the number you choose to display may affect how long the page takes to load. For example, you may want to limit the number printed to only the top 20-50 movies recommended or to movies not rater by the given rater.

You may also include CSS styling for your table using the <style> tag before you print the table. There are no restrictions on which movies you print, what order you print them in, or what information you include about each movie.

Parámetros

webRaterID	the ID of a new Rater that has been already added to the RaterDatabase with ratings for the
	movies returned by the method getItemsToRate

Implementado en movieRecommendaton.recommenderrunner.RecommendationRunner.

6.28. Referencia de la Clase edu.duke.Shape

Diagrama de colaboración para edu.duke.Shape:

Métodos públicos

- Shape ()
- Shape (FileResource file)
- void addPoint (Point p)
- Point getLastPoint ()
- Iterable < Point > getPoints ()

Atributos privados

■ ArrayList < Point > points

6.28.1. Descripción detallada

The Shape class represents a collection of Points that can easily model a polygonal shape. Points can be added in order via code or given using a file, one point per line separated by a comma. The points can then be accessed in the order they were added one at a time, using the method getPoints.

Example usage:

```
Point a = new Point(3, 4);
Point b = new Point(2, 5);
Shape s = new Shape();
s.addPoint(a);
s.addPoint(b);
s.addPoint(new Point(1, 1));
for (Point p : s.getPoints()) {
    System.out.println(p);
}
```

A Shape can also be created using file in the following format:

```
3, 4
2, 5
1, 1
```

Example file usage:

```
FileResource fr = new FileResource();
Shape s = new Shape(fr);
for (Point p : s.getPoints()) {
        System.out.println(p);
}
```

This software is licensed with an Apache 2 license, see $http://www.apache.org/licenses/\leftarrow LICENSE-2.0$ for details.

Autor

Duke Coursera Team

6.28.2. Documentación del constructor y destructor

6.28.2.1. Shape() [1/2]

```
edu.duke.Shape.Shape ( ) [inline]
```

Create an empty Shape object, one with no points.

6.28.2.2. Shape() [2/2]

Create a Shape object from a file with x,y coordinates of points, in order, one pair of x,y per line.

Each x,y are comma-separated, e.g.,

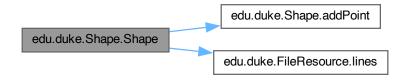

```
3,4
-2,5
```

whitespace on line is skipped.

Parámetros

file is the FileResource accessible and bound to a file with one pair of points per line

Gráfico de llamadas para esta función:

6.28.3. Documentación de las funciones miembro

6.28.3.1. addPoint()

Add a point to this shape/polygon.

The order in which points are added defines the order in which points are accessed.

Parámetros

```
p is the Point added to this shape
```

Gráfico de llamadas a esta función:

6.28.3.2. getLastPoint()

```
Point edu.duke.Shape.getLastPoint ( ) [inline]
```

Return the last point added to this shape/polygon

Devuelve

the last Point added

6.28.3.3. getPoints()

```
Iterable< Point > edu.duke.Shape.getPoints ( ) [inline]
```

Allow access to this shape one point at a time.

Devuelve

an Iterable that allows access to points

6.28.4. Documentación de los datos miembro

6.28.4.1. points

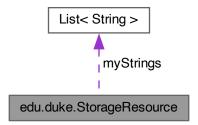

```
ArrayList<Point> edu.duke.Shape.points [private]
```

La documentación para esta clase fue generada a partir del siguiente fichero:

6.29. Referencia de la Clase edu.duke.StorageResource

Diagrama de colaboración para edu.duke.StorageResource:

Métodos públicos

- StorageResource ()
- StorageResource (StorageResource other)
- void clear ()
- void add (String s)
- int size ()
- boolean contains (String s)
- Iterable < String > data ()

Atributos privados

■ List< String > myStrings

6.29.1. Descripción detallada

The StorageResource class stores any number of String objects and allows access to these stored values one at a time, using the method data. These strings can then be iterated over in the order they were added using a for loop.

This class mirrors an ArrayList<String> in some functionality, but is simpler to use and fits the Duke/ \leftarrow Coursersa model of creating and using iterables.

Example usage:

```
FileResource fr = new FileResource();
StorageResource store = new StorageResource();
for (String s : fr.words()) {
    store.add(s);
}
// can process store here, e.g.,
// get number of strings stored
int x = store.size();
for (String s : store.data()) {
    // print or process s
}
```

This software is licensed with an Apache 2 license, see $http://www.apache.org/licenses/ \leftarrow LICENSE-2.0$ for details.

Duke Software Team

6.29.2. Documentación del constructor y destructor

6.29.2.1. StorageResource() [1/2]

```
edu.duke.StorageResource.StorageResource ( ) [inline]
```

Create an empty StorageResource object

6.29.2.2. StorageResource() [2/2]

Create an StorageResource object that is a copy of another list.

Parámetros

other the original list being copied

6.29.3. Documentación de las funciones miembro

6.29.3.1. add()

Adds a string to this storage object.

Parámetros

s the value added

6.29.3.2. clear()

```
void edu.duke.StorageResource.clear ( ) [inline]
```

Remove all strings from this object so that .size() == 0.

6.29.3.3. contains()

Determines if a string is stored in this object.

Parámetros

s string searched for

Devuelve

true if and only if s is stored in this object

6.29.3.4. data()

```
{\tt Iterable} < {\tt String} \, > \, {\tt edu.duke.StorageResource.data} \,\, \hbox{( )} \quad \hbox{[inline]}
```

Create and return an iterable for all strings in this object.

Devuelve

an Iterable that allows access to each string in the order stored

Gráfico de llamadas a esta función:

6.29.3.5. size()

```
int edu.duke.StorageResource.size ( ) [inline]
```

Returns the number of strings added/stored in this object.

Devuelve

the number of strings stored in the object

6.31. Referencia de la Clase movieRecommendaton.filters.TrueFilter

Diagrama de herencias de movieRecommendaton.filters.TrueFilter

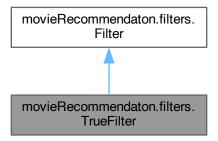

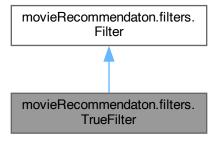

Diagrama de colaboración para movieRecommendaton.filters.TrueFilter:

Métodos públicos

■ boolean satisfies (String id)

6.31.1. Descripción detallada

Filter that always returns "true", it's always satisfied.

6.31.2. Documentación de las funciones miembro

6.31.2.1. satisfies()

```
boolean movieRecommendaton.filters.TrueFilter.satisfies ( {\tt String} \ id \ ) \quad [{\tt inline}]
```

Returns true if the ID passes the filter.

Parámetros

```
id A generic ID for an object.
```

Implementa movieRecommendaton.filters.Filter.

La documentación para esta clase fue generada a partir del siguiente fichero:

src/main/java/movieRecommendaton/filters/TrueFilter.java

6.32. Referencia de la Clase edu.duke.URLResource

Métodos públicos

- URLResource (String name)
- Iterable < String > lines ()
- Iterable < String > words ()
- String asString ()
- CSVParser getCSVParser ()
- CSVParser getCSVParser (boolean withHeader)
- CSVParser getCSVParser (boolean withHeader, String delimiter)
- Iterable < String > getCSVHeaders (CSVParser parser)

Métodos privados

String initFromStream (InputStream stream)

Atributos privados

- String myPath
- String mySource

6.32.1. Descripción detallada

The URLResource class opens a connection to a URL and allows access to the contents of the web page a line at a time, using the method lines, or a word at a time, using the method words. These strings can then be iterated over using a for loop.

Example usage:

```
URLResource ur = new URLResource("http://www.dukelearntoprogram.com/");
for (String s : ur.lines()) {
    // print or process s
}
```

If each line of the web page represents separated data values, because its a CSV file, then the user can get a getCSVParser object to access that data more directly, using one of the getCSVParser methods.

Example CSV usage:

```
URLResource ur = new URLResource("http://www.dukelearntoprogram.com/course2/java/food.csv");
for (CSVRecord record : ur.getCSVParser()) {
    // print or process fields in record
    String name = record.get("Name");
    // other processing
}
```

This software is licensed with an Apache 2 license, see $http://www.apache.org/licenses/ <math>\leftarrow$ LICENSE-2.0 for details.

Autor

Duke Software Team

6.32.2. Documentación del constructor y destructor

6.32.2.1. URLResource()

```
edu.duke.URLResource.URLResource ( {\tt String} \ name \ ) \quad [{\tt inline}]
```

Create a URLResource object bound to the web page whose URL is given as the parameter.

Constructing the object opens a connection and reads the contents of the web page.

Parámetros

name is the name of the URL, it must start with "http" or "https"

Excepciones

Gráfico de llamadas para esta función:

6.32.3. Documentación de las funciones miembro

6.32.3.1. asString()

```
String edu.duke.URLResource.asString ( ) [inline]
```

Return entire open web page as one string.

Devuelve

a String that is the contents of the open web page

6.32.3.2. getCSVHeaders()

```
\label{eq:continuous} \mbox{ Iterable< String > edu.duke.URLResource.getCSVHeaders (} \\ \mbox{ CSVParser } parser ) \mbox{ [inline]}
```

Allows access to the column names of the header row of a CSV file (the first line in the file) one at a time. If the CSV file did not have a header row, then an empty Iterator is returned.

Parámetros

parser	the CSVParser that has been created for this web page
--------	---

Devuelve

an Iterable that allows access one header name at a time

6.32.3.3. getCSVParser() [1/3]

CSVParser edu.duke.URLResource.getCSVParser () [inline]

Returns a CSVParser object to access the contents of an open web page.

Each line of the web page should be formatted as data separated by commas and with a header row to describe the column names.

Devuelve

a CSVParser that can provide access to the records in the web page one at a time

Excepciones

exception	if this web page does not represent a CSV formatted data
-----------	--

Gráfico de llamadas para esta función:

Gráfico de llamadas a esta función:

6.32.3.4. getCSVParser() [2/3]

```
CSVParser edu.duke.URLResource.getCSVParser ( boolean\ \textit{withHeader}\ ) \quad [inline]
```

Returns a CSVParser object to access the contents of an open web page, possibly without a header row.

Each line of the web page should be formatted as data separated by commas and with/without a header row to describe the column names.

Parámetros

wi	thHeader	uses first row of data as a header row only if true
----	----------	---

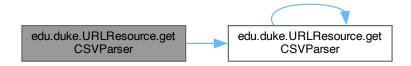

Devuelve

a CSVParser that can provide access to the records in the web page one at a time

Excepciones

exception	if this web page does not represent a CSV formatted data
-----------	--

Gráfico de llamadas para esta función:

6.32.3.5. getCSVParser() [3/3]

```
CSVParser edu.duke.URLResource.getCSVParser (
boolean withHeader,
String delimiter ) [inline]
```

Returns a CSVParser object to access the contents of an open web page, possibly without a header row and a different data delimiter than a comma.

Each line of the web page should be formatted as data separated by the delimiter passed as a parameter and with/without a header row to describe the column names. This is useful if the data is separated by some character other than a comma.

Parámetros

withHeader	uses first row of data as a header row only if true
delimiter	a single character that separates one field of data from another

Devuelve

a CSVParser that can provide access to the records in the web page one at a time

Excepciones

exception	if this web page does not represent a CSV formatted data	
exception	<pre>if delimiter.length() != 1</pre>	

6.32.3.6. initFromStream()

Gráfico de llamadas a esta función:

6.32.3.7. lines()

```
Iterable< String > edu.duke.URLResource.lines ( ) [inline]
```

Allow access to open web page one line at a time.

Devuelve

an Iterable that allows access one line at a time

6.32.3.8. words()

```
Iterable< String > edu.duke.URLResource.words ( ) [inline]
```

Allow access to this open web page one word at a time, where words are separated by white-space. This means any form of spaces, like tabs or newlines, can delimit words.

Devuelve

an Iterable that allows access one word at a time

6.32.4. Documentación de los datos miembro
